

AI First Build & Release: Component Onboarding Enablement Session

Deepak Chourasia
SPSE, Architect
DevTestOps - Red Hat AI

Where are we with Agentic SDLC?

Agenda

- Self-contained Component Onboarding Skills
 - Context & Motivation
 - Skills & Structure
 - Create Onboarding Jira skill - Deep dive + demo
 - Onboard Konflux component skill - Detailed walkthrough
 - Component Onboarding - Agentic Pipeline Flow
 - AI Impact Assessment: Component Onboarding Org Pulse Dashboard
- Connecting the dots ...
 - Proposed: E2E ADLC + Component Onboarding Flow
 - Proposed: Onboarding Maturity Assessor Flow
 - Proposed: Create Component Onboarding Jira (Automated) Flow
- Future plans & QA

Self-contained Component Onboarding Skills

Problem Statement & Motivation

Component Onboarding Today Is Slow & Manual

2-Week Lead Time Required

Component teams must file onboarding requests two weeks before code freeze. Every new component delays release cycle.

Dozens of Manual Steps Across 6+ Repos

Quay repos · Konflux configs · Tekton pipelines · Dockerfile labels · bundle patches · delivery repos – all done by hand, across GitLab and GitHub.

DevOps Bottleneck

Only DevTestOps can execute the process. Component teams are permanently blocked on a single team, with no self-service path.

Skills & Structure

Run by Component Teams

create-component-onboarding-jira

- Usage:
 - `/create-component-onboarding-jira`
 - `/create-component-onboarding-jira <optional-jira-url>`
- Interactively collects all onboarding information
- Validates inputs against a JSON Schema
- Create a new jira by cloning the template if not already created
- Attaches a structured YAML to the Jira ticket
- Sets yaml-attached label → CI picks it up automatically

The skill can be installed as aiops-skills plugin from skills-registry marketplace

Demo

Skills & Structure

Run by GitLab CI · Every 2 Hours

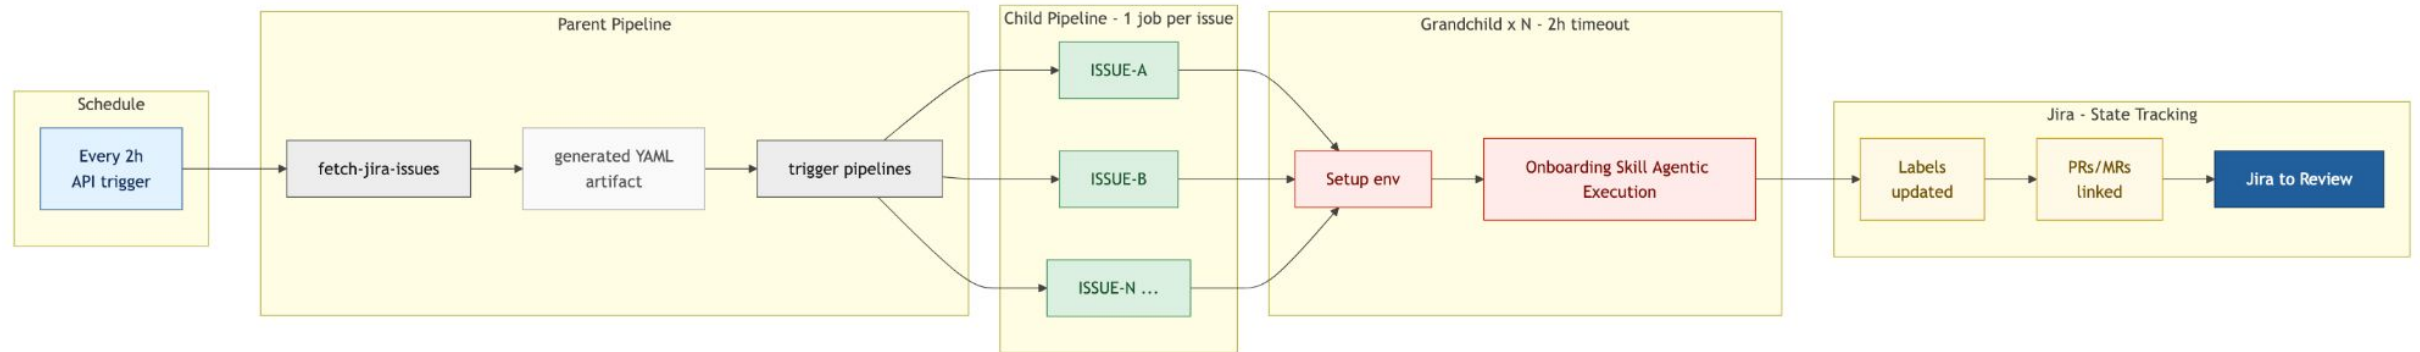

onboard-konflux-components-for-odh-and-rhoai

- Reads YAML from Jira as the single source of truth
- Executes all onboarding steps sequentially
- Raises PRs/MRs for each step
- Mandatory HITL, no changes pushed unreviewed
- Does not keep waiting for HITL
- Keeps the jira updated with progress, appropriate labels and status

Onboarding Pipeline

1 Validate Jira YAML & Inputs	7 Integrate with Bundle
2 Create Quay Repository	8 Create RHOAI Delivery Repo (RHOAI only)
3 Onboard to Konflux Release Data	9 Update Product Listing (RHOAI only)
4 Add Build Pipelines (Konflux Central)	10 Setup Auto-Merge (RHOAI only)
5 Run ODH Onboarder Workflow (ODH only)	11 Enable Renovate (RHOAI only)
6 <i>Integrate with ODH Operator (if operator)</i>	12 Sync Renovate (RHOAI only)

Component Onboarding - Agentic Pipeline Flow

Demo

- Component - **odh-ogx-core**
- Jira created using - **"create-component-onboarding-jira-skill"**
 - [RHOAIENG-61363](#)
- Picked up by the Onboarding Agent Pipeline
- Onboarding processed and jira updated
-

Advantages

=

Fully Idempotent

Completed steps are always skipped. Re-running any number of times is safe – no duplicate PRs or MRs, ever.

2h

Scheduler enabled async agent

Every 2 hours the pipeline re-runs, detects what merged, and advances the next unblocked steps automatically.

+

100% HITL Mandate

All the changes are in form of PRs, which need to be reviewed and merged by DevOps team

J

Jira-Backed State

pipeline_state.json is rebuilt from Jira labels on every fresh CI checkout – no persistent local state required.

↑

No waiting, just raise & exit

Each run raises all newly-unblocked PRs/MRs and exits immediately – never waits for code reviews or merges.

!

Least Dependency on DevOps

DevOps only need to review the PRs, rest entire flow running on its own

AI Impact Assessment

Component Onboarding

Automated onboarding of components into ODH & RHOAI via Konflux

Onboarded
13 completed

In Progress
1 ongoing

Completion Rate
93%

By Product Context
4 RHOAI / **10** ODH

Avg. Time to Onboard
3 days (AI)
Manual avg: 27 days

AI Time Savings
89% faster
27d → 3d

Connecting the dots ...

Where are we with Agentic SDLC?

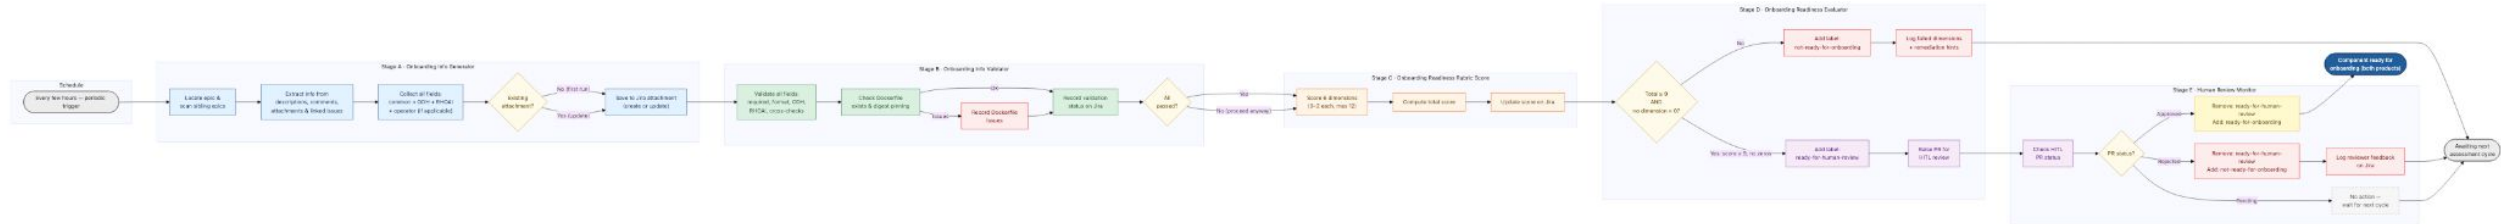

Proposed: E2E ADLC + Component Onboarding Flow

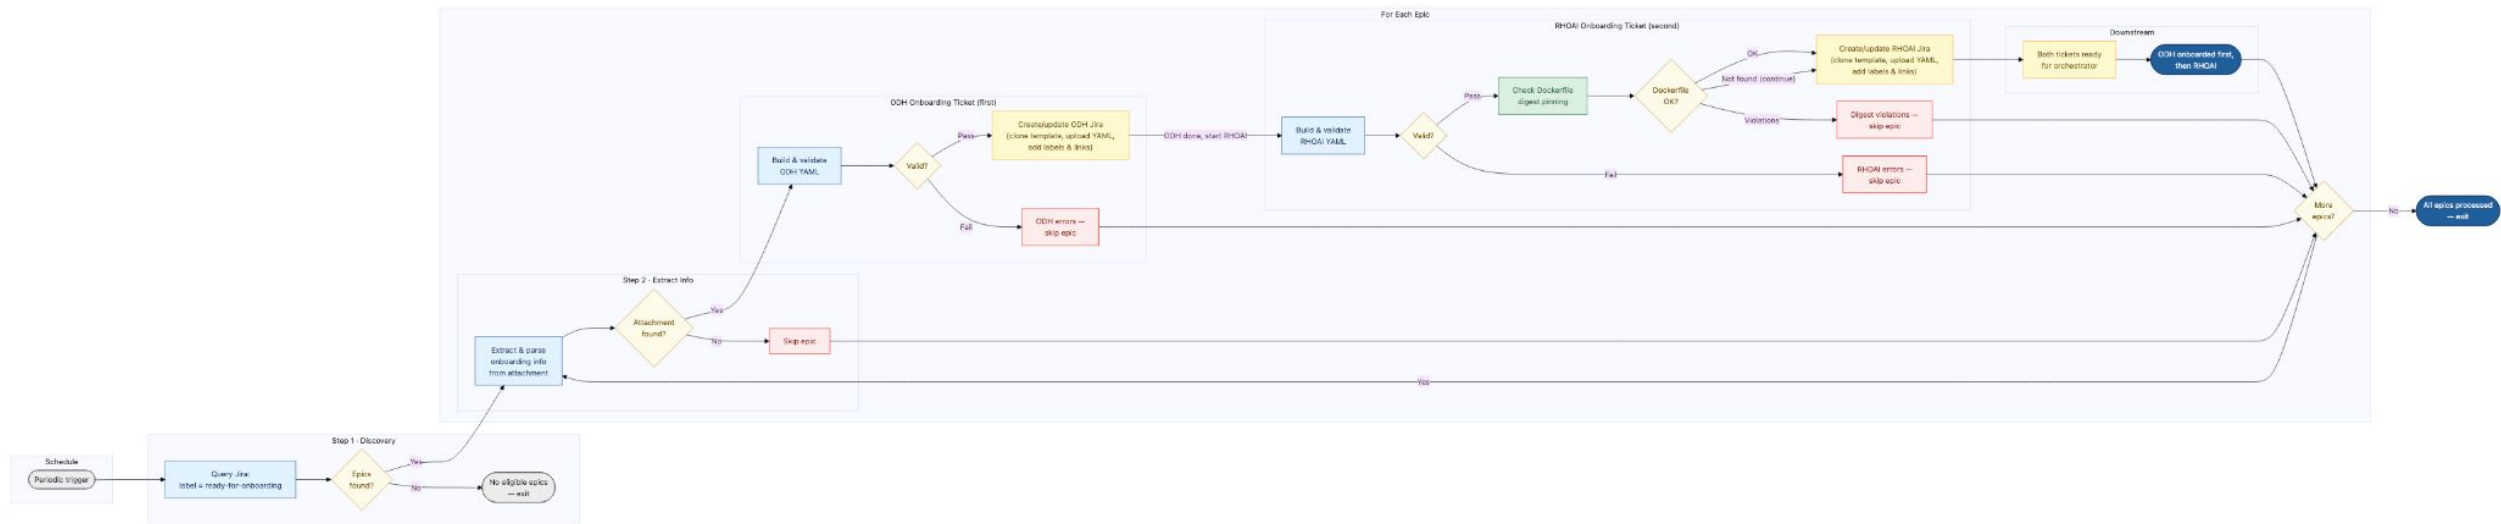

<https://rhoai-component-onboarding-fcc915.gitlab.io/adlc-design/adlc-onboarding-flow.html#e2e-adlc-component-onboarding>

Proposed: Onboarding Maturity Assessor Flow

<https://rhoai-component-onboarding-fcc915.gitlab.io/adlc-design/adlc-onboarding-flow.html#maturity-assessor-summary>

Proposed: Create Component Onboarding Jira (Automated) Flow

<https://rhoai-component-onboarding-fcc915.gitlab.io/adlc-design/adlc-onboarding-flow.html#create-onboarding-jira-summary>

Future Plans

- Refine & implement onboarding-maturity-assessor + create-component-onboarding-jira (automated)
- Collaborate with strat-creator, epic-creator and other ADLC skills to fully connect to dots
- Start implementing “Release” skills
